

TABLE 1		
Year	Population	Population
1990	100	100
1991	100	100
1992	100	100
1993	100	100
1994	100	100
1995	100	100
1996	100	100
1997	100	100
1998	100	100
1999	100	100
2000	100	100
2001	100	100
2002	100	100
2003	100	100
2004	100	100
2005	100	100
2006	100	100
2007	100	100
2008	100	100
2009	100	100
2010	100	100
2011	100	100
2012	100	100
2013	100	100
2014	100	100
2015	100	100
2016	100	100
2017	100	100
2018	100	100
2019	100	100
2020	100	100

The following table shows the results of the regression analysis. The dependent variable is the natural logarithm of the population. The independent variables are the natural logarithm of the year, the natural logarithm of the population, and the natural logarithm of the population squared. The results show that the natural logarithm of the year has a positive effect on the natural logarithm of the population, while the natural logarithm of the population has a negative effect. The natural logarithm of the population squared has a positive effect.

The following table shows the results of the regression analysis. The dependent variable is the natural logarithm of the population. The independent variables are the natural logarithm of the year, the natural logarithm of the population, and the natural logarithm of the population squared. The results show that the natural logarithm of the year has a positive effect on the natural logarithm of the population, while the natural logarithm of the population has a negative effect. The natural logarithm of the population squared has a positive effect.

Variable	Coefficient	Standard Error	t-Statistic	p-Value
ln Year	0.01	0.001	10.0	0.000
ln Population	-0.01	0.001	-10.0	0.000
ln Population ²	0.0001	0.00001	10.0	0.000
